

Dear Colleague –

Not too long ago I was asked what makes HCI different. The person who asked the question was a good friend who also happened to be a long term customer. The answer is pretty simple...people. HCI has been very fortunate to work with people who understand what it takes to provide the very best care. While we strive to make sure we have the best equipment, without physicians and technologists who are committed to excellent patient care, the equipment is secondary. HCI only works with the best. We hire the best personnel and invest in continued training to insure they are aware of the latest trends in our industry. Turnover at HCI is very low with our collective experience totaling well over 100 years. While we are always interested in adding more customers, we only contract with people who have the same dedication to excellent patient care we do. The vendors we select must also exhibit the same commitment to quality our customers and clients have. Together, we have been able to take care of the most important people in this equation, the patients.

Robert J. Stillely  
President  
Heart Care Imaging, INC.

So, why am I writing about 'people' in this month's newsletter. Simply to say thanks to everyone who works with HCI.

Together, we are making a difference!

Best regards,
